

My name is Julian Camacho. I was born in North Carolina and grew up in Mequon, a SMALL town just north of Milwaukee. I always loved to read, and tended to gravitate towards books on math and science.

As a programmer and builder for my high school robotics team, fascinated by automation, I developed a deep appreciation for the complex synergy required between control algorithms and hardware mechanics. I feel that I grew profoundly through robotics, realizing that my passion was for applying math and science to solve real world problems. This inspired me to pursue further studies in electrical engineering.

I'm grateful to the warm, open-minded people in the communities where I was raised, and hope to reflect these characteristics as I contribute to communities at UCLA Engineering and beyond. I'm interested in UCLA's ACM ICPC team, and also am part of UCLA IEEE. I participate in one of the Micromouse teams.

I'm excited to experience new challenges and learn from talented peers and mentors in UCLA's Fast Track Program.
